Education

University of Minnesota–Twin Cities

Bachelor of Science in Computer Science

Dec 2025

Minneapolis, MN

– Coursework: Software Design & Testing, Data Structures & Algorithms, Databases, Operating Systems

Technical Skills

Languages: Python, SQL (PostgreSQL, MySQL), Java, JavaScript, TypeScript, HTML/CSS, R, C++, C

Frameworks & Libraries: React, Node.js, Express.js, Pandas, NumPy, Matplotlib, Scikit-learn

Databases & Developer Tools: MongoDB, PostgreSQL, Docker, Git, GitHub Actions, Unix/Linux, Power BI, automated testing, CI/CD, AI-assisted development tools

Experience

Data Analyst Intern

May 2022 – Aug 2022

University of Minnesota–Twin Cities | Office of Admissions

Minneapolis, MN

- Built a reliable, repeatable data pipeline in Python using Pandas & NumPy to standardize 200,000+ student records, improving data accuracy by 90% & strengthening admissions data-integrity workflows
- Built Power BI dashboards analyzing applicant demographics, admissions funnel metrics, & year-over-year variance to translate complex data into actionable stakeholder insights
- Collaborated cross-functionally in Agile/Scrum sprints & presented weekly, data-driven insights to technical & non-technical stakeholders

Computer Science Teaching Assistant

Aug 2023 – Jun 2025

University of Minnesota–Twin Cities | Department of Computer Science & Engineering

Minneapolis, MN

- Led weekly Java lab sessions for 200+ students covering Software Design & Testing, Data Structures, & Data Processing
- Built & maintained automated grading tools in Python, improving repeatability, reducing repetitive regrade requests, & reinforcing clean-code and software-quality standards
- Debugged student software, contributed to code reviews, & guided students toward maintainable solutions through office hours and exam review sessions

Project Manager – Aerodynamics & Aviation Engagement Program

Sep 2025 – Dec 2025

Air Care Alliance

Minneapolis, MN

- Owned delivery of a multi-stakeholder initiative sponsored by Air Care Alliance, coordinating cross-functional logistics for a 200+ participant engineering competition
- Led the end-to-end project lifecycle across risk mitigation, scheduling, budgeting, vendor alignment, marketing, & execution, demonstrating initiative, accountability, & ownership
- Maintained technical documentation with cross-functional teammates; conducted post-event analysis & communicated results to stakeholders

Technical Projects

Open Source Contributor – Actual Budget | *React, TypeScript, Git, GitHub*

Jun 2026 – Present

- Diagnosed, debugged, & fixed a split-transaction UI defect (phantom \$0.00 row & render flicker) in Actual Budget, a widely-used open source personal-finance application (PR #8364, merged)
- Traced the root cause through the React component tree & implemented a targeted, maintainable state-handling fix without regressing existing behavior
- Tested & validated the solution against the project's automated test suite and CI pipeline, iterating on cross-functional maintainer feedback before merge

EPL Predictor | *Python, Pandas, Scikit-learn, Matplotlib, Jupyter Notebook*

Jun 2024 – Present

- Developed machine learning models in Python to solve a real-world prediction problem, achieving a benchmark 67.5% accuracy on English Premier League match outcomes
- Built an end-to-end data pipeline covering preprocessing, cleaning, & feature engineering for repeatable model training and evaluation
- Trained, tested, & optimized a Random Forest model using rolling-performance features & cross-validated hyperparameter tuning

Gopher Walk | *Figma, Docker, GitHub, HTML, CSS*

Jan 2024 – May 2024

- Designed & developed a campus mapping application serving 35,000+ users, prototyping/ iterating UI/UX in Figma
- Used Git branching workflows & Docker containerization to support reliable, reproducible builds and deployments
- Led Agile development cycles across sprint planning, iterative delivery, & stand-ups, incorporating user-research feedback into practical product decisions

Minerva | *Google Maps API, JavaScript, Node.js, Express.js, HTML5, CSS3, Docker*

Jan 2023

- Led a team of 3 to build a full-stack web application; designed & integrated RESTful APIs in Node.js/Express.js for reliable client-server communication & third-party integrations
- Modeled user data in MongoDB (NoSQL), defining schemas, relationships, & validation logic to support maintainable personalized features
- Containerized the application with Docker & maintained a consistent, reproducible build and deployment workflow through GitHub

Certifications

Oracle Cloud Data Management & Google Project Management Professional Certificate
